

Hardware Hosting

In today's economic climate, many organisations are looking towards hardware hosting as part of their IT strategy. There are many reasons for implementing hardware hosting, however the main ones are:

- Off site hosting is ideal for a DR solution
- Having your own computer site, UPS, generators, air conditioning etc. is expensive
- A computer site can take time, effort and is expensive to maintain
- Can be used as a temporary solution while you are building a new computer room or relocating to new premises.

Standby, through its 3rd party provider, can supply a secure hosting facility that is based in Bahrain. The hosting site is situated in a modern, purpose built high quality computer room. Hosting facility features and services include:

- Purpose built computer room constructed to a high standard
- Power and UPS onsite
- Air conditioning
- Generator backup power
- Computer room gas flooding fire suppression
- Experienced personnel with strong technical knowledge in UNIX, LINUX, Windows, networks and storage
- Personnel can set up your systems if required
- Personnel fluent in English, Arabic and Urdu available
- Help desk services.

Advantages of outsourcing your IT hosting

- ✓ Your IT risk can be split
- ✓ Resolves issues such as lack of space in your current computer room

- ✓ Overall costs are reduced by sharing infrastructure e.g. generators, UPS, air conditioning etc.
- ✓ Your computer hardware is located away from your organisation's head office
- ✓ Facility is established and well managed
- ✓ Provides a safe, secure environment for your IT infrastructure
- ✓ Scalable, stable and flexible
- ✓ Assures uptime
- ✓ Option to provide your own hardware
- ✓ You have complete access to your data
- ✓ If your disaster recovery site is hosted, there are personnel onsite who can assist with your recovery
- ✓ Desks will be provided for up to 3 people.

Running your own computer centre with its associated infrastructure is expensive. Outsourcing to a hosting provider can be a cost effective IT solution or alternately can provide a favourable disaster recovery option for your organisation.
