

Emergency Risk Management

Efficient and effective emergency risk management will assist your company to continue to operate in situations of potential and real risk, whether from environmental, terrorism or simply internal process risk. Standby helps our clients to survive these periods of critical disruption.

Standby can help with

- Understanding critical systems within a company and mitigating the impact of disruption in the advent of a known or unknown event
- Establishing documented procedures, identifying key staff and response roles for dealing with emergencies
- Conducting trial evacuations, emergency exercises and establishing emergency plans
- Undertaking a gap analysis and audit of all procedures and systems
- Implementing management procedures for all potential and actual emergencies
- Training staff in first response use of fire fighting equipment
- Specialist training working within confined spaces, training and use of breathing apparatus, high angle rescue, chemical identification stabilisation and decontamination
- Establishing co-ordinated incident management systems for companies during incidents where multiple emergency agencies will be present
- Implementing procedures for managing national and international incidents that may affect your company over a short or extended time period
- Fire engineering design and fixed extinguishing systems.

Benefits of using Standby

- ✓ We use international best practice methods for emergency and disaster relief

- ✓ We have a broad knowledge of compliance requirements to meet British and American standard requirements
- ✓ Our consultants have knowledge and experience in the Middle East and overseas
- ✓ We can save companies revenue by installing appropriate fire extinguishment systems, addressing specific risks
- ✓ We assist clients in ensuring that all passive systems are functioning and standardised testing programmes for emergency systems and equipment

Standby consultants have significant experience in emergency management, fire service management and civil defence operations. They hold degrees and diplomas in their field of expertise.

Emergency Risk Management is an important part of an organisation's ability to identify existing risks and decide how to manage those risks to minimise future harm to the organisation.
